

e-Learning Training Program

Who are we?

Conart Engineers is a 4 decade old, ISO 9001: 2015 BSE listed company, providing Industrial, Commercial and Infrastructure Construction, Engineering and Project Management services.

What is the Construction Revolution 1.0 training program?

Conart believes in sharing and spreading knowledge and experience to young minds joining the construction industry. We have developed a training program (<https://www.conartengineers.com/training>) for fresh graduates in collaboration with an e-Learning platform www.constructskills.com.

The goal of this 2-week training program is to link college graduates to local organizations (architect/contractors/builders) and provide them with experience, thus contributing to the upliftment of the community.

What should a Participant (college Graduate) expect?

The training program is a comprehensive 2-week training thru e-learning mode. Upon successful completion of training (review Training curriculum and program schedule), take an exam to ensure the understanding of the subject matter. The participants' names will then be included and shared in the database of prospective organization's internship programs (refer terms & conditions) for a duration up to 3-months.

What should an Organization expect?

There are hundreds of students graduating every year. To find committed college graduates, with a better understanding of site practical knowledge, we make them go through a 2-week training program. Our goal is to train graduates, and provide them with tools so that their 3-month training is mutually beneficial to both, you and them.

Why CSR by Conart?

Conart interviews many college graduates, and have found most of them lacking site practical knowledge. To improve quality, safety, and leadership culture within the AEC industry, Conart has taken leadership overseas, coordinating, and managing the education and training programs that provide our graduates with knowledge and skills ranging from the basic to the very advanced to succeed. Conart's goals are to bridge the gaps in the education system and field-specific skills required, overall uplifting the community.
